Overview of Kidde Fire Suppression Systems

The Kidde fire suppression system manual begins with an introduction to the various types of fire suppression technologies offered by Kidde. These systems include automatic and manual fire suppression units using agents such as clean agents, dry chemicals, and wet chemicals. Each system is engineered to address specific fire hazards, ranging from electrical fires to flammable liquid fires. The manual outlines system components, including detection devices, control panels, discharge nozzles, and agent storage tanks. An understanding of these elements is vital for proper installation and effective operation.

System Components

The manual details the essential components that make up a Kidde fire suppression system. Detection devices such as smoke detectors, heat detectors, and flame sensors monitor the protected area for signs of fire. Once a fire is detected, the control panel activates the release of the suppression agent through strategically placed nozzles. The

agent storage tank contains the extinguishing substance, which varies depending on the system type. Each component is designed to work in unison to minimize fire damage and ensure rapid response.

Types of Suppression Agents

Kidde fire suppression systems utilize different agents tailored to specific fire classes. Clean agents like FM-200 and Novec 1230 are used for sensitive environments such as data centers where residue-free extinguishment is critical. Dry chemical agents are effective against flammable liquids and electrical fires, whereas wet chemical agents are typically employed in commercial kitchen environments to control grease fires. The manual provides detailed descriptions of each agent's properties and applications.

Installation Guidelines

Proper installation of a Kidde fire suppression system is fundamental to its performance. The manual provides step-by-step instructions for site assessment, system design, and installation procedures. It emphasizes adherence to local codes and standards, including NFPA guidelines.
