Installing the Kohler Gleam Toilet

Now that you've prepared the area and gathered your tools and materials, you're ready to begin the installation of the Kohler Gleam toilet.

1. Install the Wax Ring

- Place the wax ring on the toilet flange. Make sure it is centered over the opening.
- If your Kohler Gleam toilet comes with a toilet seal instead of a wax ring, follow the manufacturer's instructions for placement.

2. Position the Toilet Bowl

- Carefully lift the toilet bowl and align it with the flange and the wax ring.
- Gently lower the bowl onto the wax ring, ensuring it fits snugly over the flange.
- Rock the bowl slightly to create a good seal with the wax ring.

3. Secure the Toilet Bowl

- Insert the toilet bolts into the flange.
- Place washers and nuts over the bolts and tighten them with an adjustable

wrench. Be careful not to overtighten, as this can crack the porcelain.

4. Install the Tank

- Position the tank onto the bowl, aligning the holes in the tank with the corresponding holes in the bowl.
- Place the tank-to-bowl gasket onto the bowl, ensuring it is seated correctly.
- Insert the tank bolts through the holes and secure them with washers and nuts.

5. Connect the Water Supply Line

- Attach the water supply line to the fill valve located at the bottom of the tank.
- Connect the other end of the supply line to the shut-off valve.

6. Turn On the Water Supply

- Open the shut-off valve to allow water to flow into the tank.
- Let the tank fill completely and check for any leaks around the connections.

Final Steps and Adjustments

Once the Kohler Gleam toilet is installed and connected, there are a few final steps to ensure everything is working correctly.

1. Test Flush

- Once the tank is filled, press the flush handle to test the toilet.
- Observe the water flow and ensure it flushes properly.

2. Level the Toilet

- Use a level to check if the toilet is sitting evenly.
- If it is wobbly, you may need to adjust the toilet bolts or add shims under the base.

3. Caulk Around the Base (Optional)

- You may choose to apply a bead of silicone caulk around the base of the toilet for a finished look and to help prevent water from damaging the floor.

- If you do caulk, allow it to cure as per the manufacturer's instructions.

4. Clean Up

- Remove any tools and leftover materials from the installation area.
- Dispose of the old toilet and any waste materials properly.
