BASIC LINUX INTERVIEW QUESTIONS AND ANSWERS

BASIC LINUX INTERVIEW QUESTIONS AND ANSWERS FOCUS ON FOUNDATIONAL KNOWLEDGE ABOUT THE LINUX OPERATING SYSTEM, ITS STRUCTURE, AND CORE COMPONENTS. THESE QUESTIONS ASSESS THE CANDIDATE'S UNDERSTANDING OF LINUX DISTRIBUTIONS, FILE SYSTEMS, USER MANAGEMENT, AND BASIC COMMANDS.

WHAT IS LINUX AND ITS KEY FEATURES?

LINUX IS A FREE AND OPEN-SOURCE UNIX-LIKE OPERATING SYSTEM KERNEL. ITS KEY FEATURES INCLUDE MULTITASKING, MULTIUSER CAPABILITIES, PORTABILITY, SECURITY, AND SUPPORT FOR VARIOUS HARDWARE PLATFORMS. LINUX IS WIDELY USED IN SERVERS, DESKTOPS, AND EMBEDDED SYSTEMS.

EXPLAIN THE LINUX FILE SYSTEM HIERARCHY.

THE LINUX FILE SYSTEM FOLLOWS A HIERARCHICAL DIRECTORY STRUCTURE STARTING FROM THE ROOT DIRECTORY (/). IMPORTANT DIRECTORIES INCLUDE:

- **/BIN** - ESSENTIAL BINARIES
- **/ETC** - CONFIGURATION FILES
- **/HOME** - USER HOME DIRECTORIES
- **/VAR** - VARIABLE DATA FILES
- **/USR** - USER PROGRAMS AND UTILITIES

WHAT ARE INODES IN LINUX?

AN INODE IS A DATA STRUCTURE USED TO REPRESENT A FILE OR DIRECTORY IN LINUX. IT STORES METADATA SUCH AS FILE SIZE, OWNERSHIP, PERMISSIONS, AND TIMESTAMPS BUT DOES NOT CONTAIN THE FILE NAME OR ACTUAL DATA.

LINUX COMMANDS AND THEIR USAGE

PROFICIENCY IN LINUX COMMANDS IS CRITICAL FOR DAILY OPERATIONS AND PROBLEM-SOLVING. THIS SECTION COVERS COMMONLY ASKED QUESTIONS RELATED TO COMMANDS USED FOR FILE MANAGEMENT, PROCESS HANDLING, AND SYSTEM MONITORING.

WHAT ARE SOME ESSENTIAL LINUX COMMANDS EVERY USER SHOULD KNOW?

ESSENTIAL LINUX COMMANDS INCLUDE:

- **LS** - LISTS DIRECTORY CONTENTS
- **CD** - CHANGES THE CURRENT DIRECTORY
- **CP** - COPIES FILES OR DIRECTORIES
- **MV** - MOVES OR RENAMES FILES
- **RM** - REMOVES FILES OR DIRECTORIES
- **PS** - DISPLAYS CURRENTLY RUNNING PROCESSES
- **TOP** - SHOWS REAL-TIME SYSTEM RESOURCE USAGE
- **CHMOD** - CHANGES FILE PERMISSIONS
- **GREP** - SEARCHES TEXT USING PATTERNS

HOW TO FIND A SPECIFIC STRING IN A FILE?

THE **GREP** COMMAND IS USED TO SEARCH FOR SPECIFIC STRINGS OR PATTERNS WITHIN FILES. FOR EXAMPLE, **grep "error" /var/log/syslog** SEARCHES FOR THE WORD "ERROR" IN THE SYSLOG FILE.

EXPLAIN THE DIFFERENCE BETWEEN `kill` AND `kill -9`.

THE `kill` COMMAND SENDS A TERMINATION SIGNAL TO A PROCESS, ALLOWING IT TO EXIT GRACEFULLY. THE `kill -9` COMMAND SENDS THE SIGKILL SIGNAL, WHICH FORCEFULLY TERMINATES THE PROCESS WITHOUT CLEANUP.

LINUX SYSTEM ADMINISTRATION INTERVIEW QUESTIONS

SYSTEM ADMINISTRATION QUESTIONS TEST THE CANDIDATE'S ABILITY TO MANAGE USERS, SERVICES, STORAGE, AND SECURITY ON LINUX SYSTEMS. THESE QUERIES OFTEN INCLUDE PRACTICAL SCENARIOS AND SECURITY BEST PRACTICES.

How do you manage user accounts in Linux?

User accounts are managed using commands such as `useradd`, `usermod`, `passwd`, and `userdel`. The `/etc/passwd` and `/etc/shadow` files store user information and encrypted passwords, respectively.

What is SELinux and how do you manage it?

SELinux (Security-Enhanced Linux) is a security module that provides mandatory access control. It enforces policies to restrict user and program privileges. Management is performed via commands like `getenforce`, `setenforce`, and editing policy files.

Describe the process of mounting and unmounting filesystems.

Mounting makes a filesystem accessible at a specific directory. The `mount` command attaches the filesystem, and `umount` detaches it. Entry points for automatic mounting are defined in `/etc/fstab`.

List common services to check and manage on a Linux server.

Important services typically include web servers (Apache, Nginx), database servers (MySQL, PostgreSQL), SSH daemon, and cron jobs. The `systemctl` or `service` commands are used to manage these services.

Shell Scripting and Automation Questions

Automation is a key aspect of Linux administration. Interview questions in this area assess scripting skills, including writing shell scripts, using loops and conditionals, and automating routine tasks.

What is a shell script and why is it used?

A shell script is a text file containing a sequence of commands executed by the shell interpreter. It simplifies task automation, system monitoring, backup processes, and repetitive administrative tasks.

Explain how to write a basic bash script to check disk usage.

A simple bash script for checking disk usage can use the `df` command:

```
#!/bin/bash
df -h | grep '/dev/sda1'
```

This script displays human-readable disk usage for the specified partition.

What are some common control structures used in shell scripting?

Common control structures include:

- **IF-ELSE** statements for conditional execution

- **FOR** AND **WHILE** LOOPS FOR ITERATION
- **CASE** STATEMENTS FOR PATTERN MATCHING

LINUX TROUBLESHOOTING AND PERFORMANCE TUNING

INTERVIEWERS OFTEN ASK QUESTIONS ABOUT DIAGNOSING AND RESOLVING LINUX SYSTEM ISSUES, AS WELL AS OPTIMIZING PERFORMANCE. THIS SECTION COVERS PRACTICAL APPROACHES AND TOOLS USED IN TROUBLESHOOTING.

HOW DO YOU CHECK SYSTEM PERFORMANCE IN LINUX?

SYSTEM PERFORMANCE CAN BE MONITORED USING TOOLS SUCH AS:

- **TOP** AND **HTOP** FOR CPU AND MEMORY USAGE
- **VMSTAT** FOR VIRTUAL MEMORY STATISTICS
- **IOSTAT** FOR I/O STATISTICS
- **NETSTAT** OR **SS** FOR NETWORK STATISTICS

WHAT STEPS WOULD YOU TAKE TO TROUBLESHOOT A SLOW LINUX SERVER?

TROUBLESHOOTING INVOLVES:

1. CHECKING RESOURCE USAGE (CPU, MEMORY, DISK I/O)
2. REVIEWING RUNNING PROCESSES WITH **ps** OR **top**
3. ANALYZING SYSTEM LOGS IN **/var/log**
4. INSPECTING NETWORK PERFORMANCE AND CONNECTIVITY
5. VERIFYING DISK SPACE AVAILABILITY

HOW CAN YOU IDENTIFY AND KILL A ZOMBIE PROCESS?

A ZOMBIE PROCESS IS A DEFUNCT PROCESS THAT HAS COMPLETED EXECUTION BUT STILL HAS AN ENTRY IN THE PROCESS TABLE. USE **ps aux | grep Z** TO IDENTIFY ZOMBIES. KILLING THE PARENT PROCESS OR REBOOTING THE SYSTEM USUALLY REMOVES ZOMBIES SINCE THEY ARE CLEANED UP WHEN THE PARENT COLLECTS THEIR EXIT STATUS.

FREQUENTLY ASKED QUESTIONS

WHAT IS LINUX AND HOW IS IT DIFFERENT FROM OTHER OPERATING SYSTEMS?

LINUX IS AN OPEN-SOURCE, UNIX-LIKE OPERATING SYSTEM KERNEL THAT SERVES AS THE FOUNDATION FOR VARIOUS DISTRIBUTIONS. UNLIKE PROPRIETARY OS LIKE WINDOWS OR macOS, LINUX IS FREE, HIGHLY CUSTOMIZABLE, AND WIDELY USED FOR SERVERS, EMBEDDED SYSTEMS, AND DEVELOPMENT ENVIRONMENTS.

HOW DO YOU CHECK THE CURRENT RUNNING KERNEL VERSION IN LINUX?

YOU CAN CHECK THE CURRENT RUNNING KERNEL VERSION BY USING THE COMMAND `'uname -r'`.

WHAT IS THE PURPOSE OF THE 'CHMOD' COMMAND IN LINUX?

THE `'chmod'` COMMAND IS USED TO CHANGE THE FILE PERMISSIONS (READ, WRITE, EXECUTE) FOR THE USER, GROUP, AND OTHERS ON FILES AND DIRECTORIES.

HOW CAN YOU FIND OUT WHICH PROCESSES ARE CONSUMING THE MOST CPU OR MEMORY ON A LINUX SYSTEM?

YOU CAN USE COMMANDS LIKE `'top'`, `'htop'`, OR `'ps aux --sort=-%cpu'` AND `'ps aux --sort=-%mem'` TO IDENTIFY PROCESSES CONSUMING THE MOST CPU OR MEMORY.

EXPLAIN THE DIFFERENCE BETWEEN HARD LINK AND SOFT LINK IN LINUX.

A HARD LINK IS A DIRECT REFERENCE TO THE INODE OF A FILE, SHARING THE SAME DATA AND CANNOT LINK DIRECTORIES. A SOFT LINK (SYMBOLIC LINK) IS A POINTER TO THE FILE NAME AND CAN LINK DIRECTORIES OR FILES ACROSS DIFFERENT FILESYSTEMS.

WHAT IS THE SIGNIFICANCE OF THE /ETC/PASSWD FILE IN LINUX?

THE `'/etc/passwd'` FILE STORES ESSENTIAL INFORMATION ABOUT USER ACCOUNTS, INCLUDING USERNAME, USER ID, GROUP ID, HOME DIRECTORY, AND DEFAULT SHELL. IT IS READABLE BY ALL USERS BUT DOES NOT CONTAIN ENCRYPTED PASSWORDS.

HOW DO YOU CHECK DISK USAGE IN LINUX?

YOU CAN CHECK DISK USAGE USING THE `'df -h'` COMMAND FOR OVERALL DISK SPACE USAGE AND `'du -sh <directory>'` TO SEE THE SIZE OF A SPECIFIC DIRECTORY.

WHAT IS A RUNLEVEL IN LINUX AND HOW DO YOU CHANGE IT?

A RUNLEVEL DEFINES THE STATE OF THE MACHINE, SPECIFYING WHICH SERVICES AND PROCESSES ARE RUNNING. YOU CAN CHANGE THE RUNLEVEL USING THE `'init'` OR `'systemctl'` COMMANDS, FOR EXAMPLE, `'systemctl isolate multi-user.target'`.

HOW DO YOU VIEW AND MANAGE SYSTEM LOGS IN LINUX?

SYSTEM LOGS ARE USUALLY STORED IN THE `'/var/log/'` DIRECTORY. YOU CAN VIEW LOGS USING COMMANDS LIKE `'cat'`, `'less'`, OR `'tail -f'`. TOOLS LIKE `'journalctl'` ARE USED TO QUERY AND MANAGE LOGS ON SYSTEMS WITH `'systemd'`.

EXPLAIN HOW YOU WOULD TROUBLESHOOT A NETWORK CONNECTIVITY ISSUE ON A LINUX SERVER.

TO TROUBLESHOOT NETWORK CONNECTIVITY, YOU CAN START BY CHECKING THE NETWORK INTERFACE STATUS WITH `'ip addr'` OR `'ifconfig'`, VERIFY ROUTING WITH `'route -n'` OR `'ip route'`, TEST CONNECTIVITY WITH `'ping'` AND `'traceroute'`, AND INSPECT FIREWALL RULES USING `'iptables'` OR `'firewalld'`.
