Examples of Math Brain Teasers for Middle School

Providing concrete examples helps illustrate the range and depth of math brain teasers suitable for middle school students. These examples demonstrate how different mathematical skills are exercised in an enjoyable and challenging way.

Example 1: The Missing Dollar Riddle

This classic math brain teaser challenges students to follow a series of transactions and identify where a dollar goes missing, promoting careful arithmetic and logical analysis.

1. Three friends check into a hotel room costing \$30.
2. Each pays \$10, totaling \$30.
3. The hotel clerk realizes the room was only \$25 and returns \$5.
4. The friends each take \$1 back and give \$2 to the bellboy.
5. Now, each friend has paid \$9, totaling \$27, plus \$2 with the bellboy makes \$29. Where is the missing dollar?

The puzzle encourages students to carefully examine the addition and subtraction steps to resolve the apparent paradox.

Example 2: Magic Square Puzzle

A magic square is a grid where the sums of numbers in each row, column, and diagonal are equal. Middle school students can be challenged to fill in missing numbers or create their own magic squares, reinforcing addition skills and pattern recognition.

Example 3: Sudoku Variations

Sudoku puzzles require placing numbers in a grid so that each row, column, and box contains all digits without repetition. These logic-based puzzles improve deductive reasoning and number sense.

Example 4: Geometry Tangram Challenge

Using seven geometric shapes called tangrams, students can be tasked with forming specific figures

or shapes. This type of brain teaser promotes spatial visualization and understanding of geometric properties.
