Sample Math Makes Sense 8 Answers and Explanations

Providing sample answers illustrates the depth and format of solutions typical within the math makes sense 8 framework. These examples demonstrate clarity, completeness, and adherence to mathematical conventions.

Example 1: Solving an Algebraic Equation

Problem: Solve for x : $3x + 5 = 20$.

Answer: Subtract 5 from both sides: $3x = 15$. Divide both sides by 3: $x = 5$.

This solution shows the proper use of inverse operations to isolate the variable, a fundamental algebra skill emphasized in math makes sense 8.

Example 2: Calculating the Area of a Triangle

Problem: Find the area of a triangle with base 8 cm and height 5 cm.

Answer: $\text{Area} = (1/2) \times \text{base} \times \text{height} = (1/2) \times 8 \times 5 = 20 \text{ cm}^2$.

The answer demonstrates application of the area formula, reinforcing measurement concepts covered in the curriculum.

Example 3: Interpreting a Data Set

Problem: The following data shows the number of books read by students last month: 3, 7, 5, 7, 4, 7,

6. What is the mode?

Answer: The mode is 7 because it appears most frequently in the data set.

This example highlights understanding of statistical terms, a key component in data management topics.

- Review problems carefully before consulting answers.
- Use answer explanations to deepen conceptual understanding.
- Practice similar problems to reinforce skills.

- Seek additional help if persistent difficulties arise.
