Sample Math Trivia Questions with Detailed Answers

Providing concrete examples of math trivia questions and answers illustrates the diversity and educational value of these challenges. The following questions vary in difficulty and topic, showcasing how math trivia can be both entertaining and informative.

1. **Question:** What is the smallest prime number greater than 50?

Answer: 53. Prime numbers are numbers greater than 1 that have no divisors other than 1 and themselves.

2. **Question:** How many degrees are in the sum of the interior angles of a hexagon?

Answer: 720 degrees. The sum of interior angles in any polygon is given by $(n-2) \times 180$, where n is the number of sides.

3. **Question:** If you multiply any number by zero, what is the result?

Answer: Zero. Multiplying by zero always yields zero regardless of the other number.

4. **Question:** What is the next number in the sequence: 2, 4, 8, 16, ...?

Answer: 32. This sequence doubles each previous number, so the pattern continues by

multiplying by 2.

5. **Question:** What is the value of Pi (π) to two decimal places?

Answer: 3.14. Pi is an irrational number representing the ratio of a circle's circumference to its diameter.
