If he leaves the goat alone with the cabbage, the goat will eat the cabbage. How can he get all three across safely?

Solution:

1. The farmer takes the goat across the river first.
2. He goes back alone to the original side.
3. He takes the wolf across the river.
4. He leaves the wolf on the other side but takes the goat back with him.
5. He leaves the goat on the original side and takes the cabbage across the river.

Question: You enter a room with 3 switches that are all off. You can't see the light bulbs from the room. You can flip the switches as many times as you want, but you can only go into the room once. How do you determine which switch controls which bulb?

Solution:

1. Turn on the first switch and leave it on for about 10 minutes.
2. After 10 minutes, turn off the first switch and turn on the second switch.
3. Enter the room.

4. The bulb that is on is controlled by the second switch.
