Detailed Mole Escape Room Answer Key

This section presents the comprehensive answer key for the Mole Escape Room, organized by puzzle type and sequence. Each solution includes explanations to ensure clarity and to assist players in understanding the logic behind the answers. Using this answer key will help players move efficiently through the game's stages.

Puzzle 1: Cipher Code Decryption

The first puzzle requires decrypting a hidden message encoded in a Caesar cipher. The solution involves shifting each letter of the ciphertext by three places backward in the alphabet. For example, the letter 'D' becomes 'A,' 'E' becomes 'B,' and so forth. Applying this method to the encrypted phrase reveals the clue needed to proceed to the next room.

Puzzle 2: Hidden Object Identification

Players must locate a specific object concealed within the room based on a series of riddles. The answer key indicates that the object is a small key hidden inside a hollow book on the top shelf of the bookcase. This key unlocks the drawer containing the next puzzle's components.

Puzzle 3: Logic Grid Puzzle

This challenge involves using a logic grid to determine the identity of the mole. By cross-referencing clues about suspects' alibis and actions, players can deduce the correct individual. The answer key provides a completed logic grid with detailed reasoning, showing that the mole is the character named "Agent Fox."

Puzzle 4: Numeric Combination Lock

The numeric lock requires a four-digit code derived from a mathematical puzzle involving prime numbers and sequences found on the room's walls. The answer key explains that the correct code is 2357, representing the first four prime numbers, which opens the final door.

Puzzle 5: Final Puzzle - Pattern Recognition

The last puzzle asks players to identify a pattern in a series of symbols. The answer key reveals that the pattern corresponds to the Morse code for the word "ESCAPE." Decoding this message leads to unlocking the exit and successfully completing the game.
