Step 3: Prime the Coil

Priming the coil is crucial to ensure that it heats evenly and avoids burning.

1. Once you have taken a puff, exhale the vapor slowly.
2. Observe how the vapor dissipates; this can indicate whether your settings are optimal.

Step 3: Adjust Your Technique

- Experiment with different inhaling techniques (short vs. long puffs) to find what suits you best.
- If the vapor is too harsh, consider lowering the wattage or switching to a lower nicotine concentration.
