Common Problem Types in Unit 1

Unit 1 contains various types of problems that reflect the key concepts being taught. Here are some common problem types that students may encounter:

1. Ratio Problems

- Example: If there are 3 apples for every 2 oranges, what is the ratio of apples to oranges?

Answer: The ratio is 3:2.

2. Integer Operations

- Example: Calculate the sum of -7 and 5.

Answer: $-7 + 5 = -2$.

3. Evaluating Expressions

- Example: If $x = 4$, evaluate the expression $3x + 2$.

Answer: $3(4) + 2 = 12 + 2 = 14$.

4. Solving Equations

- Example: Solve for x : $x + 3 = 10$.

Answer: $x = 10 - 3$, so $x = 7$.

Challenges Students Might Face

While Unit 1 covers essential concepts, students may face challenges that can hinder their understanding. Common difficulties include:
