Understanding the PSM Exam Structure

The Professional Scrum Master (PSM) exam is designed to assess a candidate's knowledge and understanding of Scrum principles, roles, events, and artifacts. It is a multiple-choice test that evaluates both theoretical knowledge and practical application. The exam typically consists of 80 questions, and candidates are given 60 minutes to complete it. A passing score usually requires answering at least 85% of the questions correctly.

Format and Time Constraints

The PSM exam is taken online and includes multiple-choice, multiple-answer, and true/false questions. The time limit demands quick thinking and familiarity with Scrum concepts to ensure all questions are answered. Since there is no penalty for guessing, it is advisable to answer every question within the allotted time.

Exam Score and Passing Criteria

Scoring is objective, with each correct answer contributing equally to the total score. The passing criterion is set to ensure that only candidates with a strong grasp of Scrum concepts succeed. Candidates who do not pass can retake the exam after a waiting period, usually 14 days.

Key Topics Covered in the Exam

The exam questions focus on Scrum theory, roles such as Scrum Master, Product Owner, and Development Team, Scrum events including Sprint Planning and Retrospective, and Scrum artifacts like the Product Backlog and Increment. Understanding the Scrum Guide thoroughly is essential.

Common PSM Exam Questions and Their Answers

Familiarity with typical PSM exam questions and answers forms the foundation of efficient preparation. Below are some representative questions along with detailed explanations to clarify the reasoning behind each answer.

Sample Question 1: What is the primary responsibility of the Scrum Master?

The Scrum Master is responsible for ensuring that Scrum is understood and enacted properly. This includes coaching the team, facilitating Scrum events, and removing impediments to progress.

Sample Question 2: During a Sprint, can the scope be changed?

Once a Sprint has started, its scope is fixed to preserve focus. However, the Product Owner can reprioritize the Product Backlog for future Sprints. Changes during the Sprint should be minimized to maintain commitment.

Sample Question 3: What are the characteristics of a Scrum Team?

A Scrum Team is self-organizing, cross-functional, and consists of the Product Owner, Scrum Master, and Developers. It is designed to deliver potentially releasable increments of product at the end of each Sprint.

List of Common Question Types

- Definition and roles of Scrum artifacts and events
- Understanding Scrum values and principles
- Scenario-based questions testing practical application

- Questions on Scrum roles and responsibilities
- Questions about Scrum framework rules and guidelines

Effective Study Strategies for PSM Exam Preparation

Success in the PSM exam requires more than rote memorization; it demands a deep understanding of Scrum practices and principles. Implementing effective study strategies can significantly improve exam performance.

Thoroughly Read the Scrum Guide

The Scrum Guide is the definitive source for all exam content. Reading it multiple times and understanding each section thoroughly is critical.

Take Practice Exams

Regular practice with sample questions helps identify knowledge gaps and improves time management skills. It also builds confidence to tackle the actual exam.

Join Study Groups and Forums

Engaging with peers in study groups or online forums allows the sharing of insights and clarification of doubts. This collaborative learning approach enhances comprehension.

Apply Scrum in Real-Life Scenarios

Hands-on experience with Scrum in a workplace or simulated environment deepens understanding and helps relate theory to practice.

Practice Questions and Explanation

Below are additional practice questions with detailed explanations to aid in exam preparation.

Practice Question 1: Who is responsible for maximizing

the value of the product?

The Product Owner is accountable for maximizing product value by managing the Product Backlog and ensuring the team works on the highest-priority items.

Practice Question 2: What happens during the Sprint Retrospective?

The Scrum Team inspects how the Sprint went regarding people, relationships, processes, and tools, then plans improvements for the next Sprint.

Practice Question 3: Can the Development Team subcontract work during a Sprint?

The Development Team is self-organizing and should perform all work necessary to create the Increment. Subcontracting may complicate this responsibility and is generally discouraged.

Sample Practice Question Set

1. What is the time-box for a Sprint Planning meeting?
2. Who facilitates Scrum events?
3. What defines a “Done” Increment?
4. Can the Product Owner cancel a Sprint?
5. What are the attributes of a Scrum artifact?

Tips for Exam Day Success

Performing well on the exam day involves strategic preparation and mindset management. The following tips can help optimize performance during the PSM exam.

Manage Your Time Wisely

With limited time for 80 questions, allocate approximately 45 seconds per question. If stuck, mark the question and return to it after completing easier ones.

Read Questions Carefully

Scrum exam questions often contain nuanced wording. Pay close attention to wording to avoid common traps and misunderstandings.

Use the Process of Elimination

Eliminate obviously incorrect answers to improve the odds when guessing. This technique is especially useful under time pressure.

Stay Calm and Focused

Maintain composure throughout the exam. Deep breaths and brief mental pauses can help reduce anxiety and improve concentration.

Frequently Asked Questions

What is the PSM exam and what does it certify?
