Types of Rhode Gear Bike Racks

Rhode Gear offers several types of bike racks tailored to different vehicle configurations and user preferences. The most common types include:

- **Hitch-mounted racks:** Attach directly to the vehicle's hitch receiver,

providing strong support for multiple bikes.

- **Trunk-mounted racks:** Secure to the rear trunk or hatch using straps and hooks, suitable for vehicles without a hitch receiver.
- **Roof-mounted racks:** Typically less common in the Rhode Gear lineup but designed for mounting bikes on the vehicle roof bars.

Each type varies in installation complexity and carrying capacity, making it important to select the appropriate model for your vehicle and transport needs.

Step-by-Step Assembly Instructions

Following the Rhode Gear bike rack instructions carefully during assembly ensures a stable and safe setup. Assembly usually involves attaching arms, securing cradles, and tightening bolts or knobs. The process differs slightly depending on the model, but the core steps remain consistent.

Tools Required for Assembly

- Adjustable wrench or socket set
- Hex keys (Allen wrenches), often included
- Screwdrivers (Phillips and flathead)

3. Installing the bike cradles or hooks onto the arms, ensuring padding is properly positioned.

4. Adjusting the arms to the desired width and height for bike accommodation.
5. Securing all fasteners firmly, but avoiding overtightening which can damage components.

Consult the specific model's manual for illustrations and part numbers to streamline assembly.

Mounting Options and Installation

Correct mounting is essential for the Rhode Gear bike rack's performance. Installation varies by rack type and vehicle but generally requires attention to secure attachment points and proper alignment.

Installing a Hitch-Mounted Rhode Gear Bike Rack

For hitch-mounted racks, the installation involves sliding the rack's shank into the vehicle's hitch receiver and securing it with a hitch pin or locking mechanism. Key considerations include:

- Confirming the hitch size matches the rack's receiver (commonly 1.25" or 2").
- Ensuring the rack is oriented correctly with arms extending outward for bike placement.
- Using a hitch lock or pin to prevent theft and provide stability.
- Testing the rack for wobble and tightening any loose components.

Installing a Trunk-Mounted Rhode Gear Bike Rack

Trunk-mounted racks attach using adjustable straps and hooks that grip the trunk lid, rear hatch, or bumper area. Installation tips include:

- Positioning the rack centrally on the rear of the vehicle to distribute weight evenly.
- Securing all straps tightly to prevent movement while driving.
- Checking that hooks are snug and protected with rubber or plastic covers to avoid vehicle damage.

- Adjusting the rack angle to avoid contact with the rear window or tail lights.

Securing and Adjusting the Bike Rack

Properly securing the bike rack and adjusting its components is vital for safe transportation and to prevent damage to both bike and vehicle. Rhode Gear bike rack instructions emphasize correct positioning and locking mechanisms.

Positioning the Bikes on the Rack

Bikes should be mounted to minimize contact between frames, wheels, and the vehicle. Recommended steps include:

- Placing bikes with alternating handlebar directions if space permits.
- Using padded cradles or straps to secure the bike frame firmly.
- Ensuring the bike's weight is balanced to avoid tilting.
- Double-checking that no part of the bike obstructs vehicle lights or license plates.

Adjusting Arms and Cradles

Most Rhode Gear racks feature adjustable arms or cradles to accommodate different bike sizes and frame shapes. Adjustments should be made as follows:

- Loosen adjustment knobs to reposition arms to the correct height.
- Slide cradles along the arm to align with the bike's frame tubes.
- Tighten knobs securely after adjustment to prevent movement.
- Utilize additional straps if provided to reinforce bike stability.

Adhering to safety guidelines ensures the Rhode Gear bike rack remains secure and prevents accidents or damage during transport.
